

Inside Track Research Note

In association with

Protecting data in your hyper-converged environment

Keep it safe, keep it simple

Freeform Dynamics, 2016

In a nutshell

About this Inside Track

The insights presented in this document are derived from independent research conducted by Freeform Dynamics. Inputs include in-depth discussions on the latest technology developments with IT vendors and service providers, along with intelligence gathered from mainstream enterprises during broader market studies.

Hyper-converged infrastructure (HCI) has been gaining popularity as a way of simplifying IT environments. Solutions in this area are already finding their place in the context of scale out storage, desktop virtualisation and the creation of flexible cloud-like platforms to support the 'service provider' IT delivery model.

Whatever the use case, a frequent question is whether the data protection functionality built into HCI systems is adequate to meet business needs. Most often the answer is 'no', so the question then becomes how best to manage data-related risks. Protecting an appliance with another appliance is an option to consider.
