

Technical White Paper

Technical Concepts of ETERNUS CS8000

Unified Data Protection with FUJITSU Storage ETERNUS CS8000

Overview

- Today's Requirements for Data Protection
- ETERNUS CS Data Protection Appliances
- ETERNUS CS8000 Overview
- CS VTL Subsystem Interfaces and Operations
- CS ViNS Subsystem Interfaces and Operations
- Managing the Data Protection Appliance
- ETERNUS CS8000 Models
- Additional Information

Table of Content

1 Today's Requirements for Data Protection	3	4.7 Data Deduplication with CS VTL	58
2 ETERNUS CS Data Protection Appliances	4	4.7.1 Deduplication Technology	58
2.1 ETERNUS CS800	4	4.7.2 Deduplication Process	58
2.2 ETERNUS CS8000	5	4.7.3 Deduplication System Architecture	59
3 ETERNUS CS8000 Overview	6	4.7.4 Deduplication and Storage of Logical Volumes	61
3.1 CS VTL Subsystem Overview	7	4.7.5 Operation of Dedup Components in the Cluster	63
3.2 CS ViNS Subsystem Overview	9	4.7.6 Multiple Deduplication Services in one System	64
3.3 Hardware Architecture	11	4.7.7 Failover and Disaster Resiliency for Deduplication	64
3.3.1 System Overview	11	4.7.8 Use Cases	66
3.3.2 Processor Nodes	11	4.7.9 Benefits of Deduplication	67
3.3.3 Infrastructure Components	13	5 CS ViNS Subsystem Interfaces and Operations	68
3.3.4 Internal RAID System	13	5.1 CS ViNS Interfaces and Logical Components	68
3.4 Shared Cluster File System	14	5.2 CS ViNS Frontend	70
3.4.1 Internal File Systems	15	5.3 CS ViNS Data Replication	73
3.4.2 Cache Mirroring Feature	16	5.3.1 Setting up the Replication of a NAS File System	74
3.4.3 Dual Site Redundancy	17	5.3.2 Replication Operation	75
3.4.4 Automatic Failover	18	5.3.3 Data Synchronization	76
3.4.5 Recovery after Site Failures	19	5.3.4 Encrypted Replication	76
4 CS VTL Subsystem Interfaces and Operations	20	5.3.5 Manual Failover and Failback	77
4.1 CS VTL Interfaces and Logical Components	20	5.3.6 Automatic Recovery from Replication Failures	78
4.1.1 Introducing the CS VTL Operation	20	5.4 CS ViNS HSM Backend	79
4.1.2 CS VTL Frontend	22	5.4.1 HSM Service	79
4.1.3 CS VTL Backend	24	5.4.2 File Systems and File Groups	82
4.1.4 Virtual and Physical Library Control	25	5.4.3 Physical Tape Storage	82
4.1.5 Tape Volume Cache (TVC)	28	5.5 HSM Data Lifecycle	84
4.2 Information Lifecycle Management with Virtual Tape	29	5.5.1 Storing and Protecting Files	84
4.2.1 Overview of Policies for Tape Volume Processing	29	5.5.2 Reading Files	85
4.2.2 Correlation between Logical and Physical Volumes	30	5.5.3 Cleaning up Obsolete HSM Copies	85
4.2.3 The Volume Group Concept	32	5.6 Multiple HSM services	86
4.2.4 The TVC within the Data Path of Tape Backup	34	5.6.1 Distributing HSM Service Resources	86
4.2.5 Tape Volume Stacking	35	5.6.2 Library Client/Manager Configurations	87
4.2.6 Un-stacked Volumes as Native Tape	35	5.7 HSM Services with Loopback to CS VTL	88
4.2.7 Data Compression	36	5.7.1 Mapping of HSM Service Objects to CS VTL Objects	89
4.2.8 Tape Volume Cache Management	36	5.7.2 Availability Considerations	89
4.3 Administration of Physical Tape Storage	39	5.8 HSM Service Availability	90
4.3.1 Save and Restore to and from Cartridges	39	5.8.1 Node-local-monitoring	90
4.3.2 Administration and Secure Handling of Meta Data	39	5.8.2 Monitoring of an Active HSMS by a Standby HSMS	90
4.3.3 Tape Reorganization and Tape Refresh	39	5.8.3 Failure Scenarios	92
4.3.4 Secure Vaults	40	5.9 HSM Backend Housekeeping	93
4.3.5 Encryption of Magnetic Tape Data	41	5.10 Archiving Applications	93
4.3.6 Backend Support of WORM Tapes	42	5.10.1 Certified Applications	93
4.4 Disaster Resiliency with Virtual Tape	43	5.10.2 File Protection Period	94
4.4.1 Multiple Library Support and Multiple Save	44	5.10.3 File Protection and HSM	94
4.4.2 Dual Site Configuration	45	6 Managing the Data Protection Appliance	95
4.4.3 Cascaded Configurations	46	6.1 User Interfaces	95
4.4.4 Native Tape Format for Cascaded Configurations	46	6.1.1 Console Graphical User Interfaces	95
4.4.5 Cascading Connections	47	6.1.2 Web-based Graphical User Interface	97
4.4.6 Cascading Usage Scenarios	49	6.1.3 Command Line Interface	98
4.5 Calculating System Performance	51	6.2 User Management	99
4.5.1 Avoiding Bottlenecks	52	6.3 User Management	99
4.5.2 Host Data Transfer Rates	53		
4.6 Tape Processing with CS VTL in the Data Center	54		
4.6.1 Introducing a CS VTL System	54		
4.6.2 Benefits for Mainframes and Open Systems	54		
4.6.3 Availability of the Appliance and Tape Processing	56		
4.6.4 Operational Advantages	57
